news

ATT at the end of April 2013 finalized the homologation process

News from Worldwide Approval agency
< BOLIVIA market >

18/6/2013

To our valued clients and partners:

This is a notice to provide you an update regarding Autoridad de Fiscalizacion y Regulacion de Telecomunicaciones y Transportes (ATT) in Bolivia.

In August, 2011, ATT implemented Law No. 164 which outlined a new type approval process for Bolivia. The past 16 months ATT has been creating a new process for spectrum management within the country. This law has also included the creation of a new homologation process for numerous types of telecommunications equipment including equipment that work within the RF spectrum.

On **April 24th, 2013**, ATT finalized the homologation process. Last week ATT released the new requirements and homologation process to the public.

This approval system was implemented immediately and affects new products and currently marketed products within Bolivia. The key points are highlighted below:

- Type Approval now Mandatory.
- **Affects equipment with RF function and will expand to other areas of telecommunications.**
- Legal Representative required.
- Lead time for certification approximately 30 days.
- **Certificate will be issued.**
- Validity of certificates is 5 years.
- **National database of approved products has been established**
- **FCC and CE Reports acceptable for type approval**
- Sample May be required for verification purposes only
- No family approvals allowed

If you would like to receive a copy of Administrative Resolution ATT-DJ-RA TL 0207/2013 in Spanish which includes the list of categories of equipment that will currently be required for Type Approval please let me know. Also I have an “unofficial” translation which I can provide.
